Download Handout #1 From Website & Name It:  
**4.8.RLastNameUnit4ReviewPart2.pdf**

**Learning Goals:**  
See Unit 4 Learning Goals on the Next Page. All of which will apply to the Unit 4 Test.

**Problems With Homework?**  
Descriptions, Tables, Graphs and Equations

**Minds On:**  
Linear and Non-Linear Equations

**Real World Math**  
Stacking Paper

**Consolidate:**  
Bring it all together...

**Desmos Math Art**  
How is it coming along?

## Unit 4 Learning Goals

RECALL & RECAP

WWW.TAPINTOTEENMINDS.COM

- #1 - I can identify properties of linear relations and apply them to determine whether a relation is linear or non-linear.
- #2 - I can compare the properties of direct variation or partial variation and identify the initial value.
- #3 - I can determine whether an equation represents a linear or non-linear relation.
- #4 - I can determine the rate of change (slope) of a line using rise over run.
- #5 - I can identify the slope ( $m$ ) and initial value ( $b$ ) in the equation,  $y = mx + b$  and explain how changing their values would impact the graph of the line.
- #6 - I can find the first differences in a table of values to determine whether a relation is linear.
- #7 - I can determine the slope of a line using the differences in a table of values.
- #8 - I can describe the meaning of the slope and y-intercept for a linear relation.
- #9 - I can determine the values of a linear relation by using a table of values, an equation, and by interpolating or extrapolating from the graph.
- #10 - I can determine the equation of a line of best fit for a scatter plot.
- #11 - I can represent linear relations in four different ways: description, tables of values, graph, and equation using a variety of tools.
- #12 - I can graph a line by hand, using a variety of techniques.
- #13 - I can make connections among the representations of a constant rate of change (slope) of a linear relation.

## EQAO: Linear and Non-Linear Equations

MIND BUSTER

WWW.TAPINTOTEENMINDS.COM

**15** Which of the following equations does **not** represent a line?

- a  $x = 5$
- b  $y = 10$
- c  $xy = 10$
- d  $5x - y + 10 = 0$

**15** Which of the following **cannot** be an equation of a line?

- a  $x = 2$
- b  $y = 7$
- c  $y = 2x^2 + 7$
- d  $2x + y + 7 = 0$

**15** Which of the following represents an equation of a line?

- a  $y = 2^x$
- b  $y = x^2 - 5$
- c  $x^2 + y^2 - 25 = 0$
- d  $2x + 3y - 5 = 0$

TECUMSEH VISTA ACADEMY

Learning Goal:

#3 - I can determine whether an equation represents a linear or non-linear relation.

Student

# Stacking Paper

REAL WORLD MATH

WWW.TAPINTOTEENMINDS.COM

What's the question?

Estimates:

TOO LOW

BEST GUESS

TOO HIGH

Given Information:

Answer the Question:

Independent Variable:

Dependent Variable:

1. Write a Description:

2. Create a table of values.

Equation:

3. Graph this relationship

**Learning Goal:** #11 - I can represent linear relations in four different ways: description, tables of values, graph, and equation using a variety of tools.

Student

**Learning Goal:** #12 - I can graph a line by hand, using a variety of techniques.

Student

4. Is this a **direct** or **partial** variation? Explain to demonstrate the learning goal below:

**Learning Goal:**

#2 - I can compare the properties of direct variation or partial variation and identify the initial value.

Student

## Stacking Paper (Continued...)

5. Describe some of the properties of linear relations that help you determine if this relation is linear or non-linear.

**Learning Goal:**

#1 - I can identify properties of linear relations and apply them to determine whether a relation is linear or non-linear.

Student

6. Find the **slope / rate of change / constant of variation** using **rise over run**. Clearly label the rise and the run on your graph to assist in your explanation.

**Learning Goal:**

#4 - I can determine the rate of change (slope) of a line using rise over run.

Student

## Stacking Paper (Continued...)

7. Find the **first differences** for both variables. What do they tell you about the linearity of this relationship? How can you use them to find slope?

**Learning Goals:**

#6 - I can find the first differences in a table of values to determine whether a relation is linear.

#7 - I can determine the slope of a line using the differences in a table of values.

Student

Copy and paste the table of values here

8. Explain the meaning of **slope,  $m$** , and the **initial value** in words with respect to this scenario.

**Learning Goal:**

#8 - I can describe the meaning of the slope and y-intercept for a linear relation.

Student

## Stacking Paper (Continued...)

9. Determine how many packages of paper it would take to stack has high as a 20 m tall building.

**Learning Goal:**

#9 - I can determine the values of a linear relation by using a table of values, an equation, and by interpolating or extrapolating from the graph.

10. What would happen to the equation if we stacked the paper in the same room, but on this table instead of on the floor.

**Learning Goal:**

#5 - I can identify the slope (m) and initial value (b) in the equation,  $y = mx + b$  and explain how changing their values would impact the graph of the line.

**Original Equation:****New Equation:**

Explain how you got your new equation and then use it to determine how many packages of paper you'd need to reach the ceiling in this new situation.

### Stacking Paper (Continued...)

11. What would happen to the equation if we stacked thicker packages of paper on the table in the same room.

**Learning Goal:**

#5 - I can identify the slope (m) and initial value (b) in the equation,  $y = mx + b$  and explain how changing their values would impact the graph of the line.

Student

Original Equation:

New Equation:

Explain how you got your new equation and then use it to determine how many packages of paper you'd need to reach the ceiling in this new situation.

12. Write the slope in as many different ways as you can.

**Learning Goal:**

#13 - I can make connections among the representations of a constant rate of change (slope) of a linear relation.

Student

Independent Variable:

Dependent Variable:

**YOUR TURN TO CREATE A SCENARIO!**

1. Write a Description:

2. Create a table of values.

3. Graph this relationship

Equation:

**Learning Goal:** #11 - I can represent linear relations in four different ways: description, tables of values, graph, and equation using a variety of tools.

Student

**Learning Goal:** #12 - I can graph a line by hand, using a variety of techniques.

Student

4. Is this a **direct** or **partial** variation? Explain to demonstrate the learning goal below:

**Learning Goal:** #2 - I can compare the properties of direct variation or partial variation and identify the initial value.

Student

**YOUR TURN (Continued...)**

5. Describe some of the properties of linear relations that help you determine if this relation is linear or non-linear.

**Learning Goal:**

#1 - I can identify properties of linear relations and apply them to determine whether a relation is linear or non-linear.

Student

6. Find the **slope / rate of change / constant of variation** using **rise over run**. Clearly label the rise and the run on your graph on the previous page to assist in your explanation.

**Learning Goal:**

#4 - I can determine the rate of change (slope) of a line using rise over run.

Student

## Stacking Paper (Continued...)

7. Find the **first differences** for both variables. What do they tell you about the linearity of this relationship? How can you use them to find slope?

**Learning Goals:**

#6 - I can find the first differences in a table of values to determine whether a relation is linear.

#7 - I can determine the slope of a line using the differences in a table of values.

Student

8. Explain the meaning of **slope,  $m$** , and the **initial value** in words with respect to this scenario.

**Learning Goal:**

#8 - I can describe the meaning of the slope and y-intercept for a linear relation.

Student

## Stacking Paper (Continued...)

9. Create a problem that you can use your equation to solve.

**Learning Goal:**

#9 - I can determine the values of a linear relation by using a table of values, an equation, and by interpolating or extrapolating from the graph.

10. Create a situation that would cause the initial value to change.

**Learning Goal:**

#5 - I can identify the slope ( $m$ ) and initial value ( $b$ ) in the equation,  $y = mx + b$  and explain how changing their values would impact the graph of the line.

Explain how you got your new equation and then create a question you can solve using this new equation.

## Stacking Paper (Continued...)

11. Create a situation that would cause the slope to change.

**Learning Goal:**

#5 - I can identify the slope ( $m$ ) and initial value ( $b$ ) in the equation,  $y = mx + b$  and explain how changing their values would impact the graph of the line.

Student

Original Equation:

New Equation:

Explain how you got your new equation and then create a question you can solve using this new equation.

12. Write the slope in as many different ways as you can.

**Learning Goal:**

#13 - I can make connections among the representations of a constant rate of change (slope) of a linear relation.

Student
